

App SW iTC allowed-with list for Application Software cPP

Allowed-with list version	0.1
Date	5 May 2021

This document contains the lists of allowed packages and PP-Modules to which exact conformance can be claimed in conjunction with the above cPP. It is used in conjunction with the 'CC Conformance' section of the cPP to provide the complete conformance statement for the cPP.

Inclusion of an object on one of these lists does not imply endorsement of the object by the App SW iTC, nor does it imply that the relevant object has been checked for compliance with the assurance requirements applicable to a PP-Configuration or ST that uses the cPP in conjunction with the relevant object.

Conformance claims from other Protection Profiles (apart from PP-Configurations that may be defined using the PP above and the allowed objects below) are not allowed by App SW cPP.

Application Software cPP vTBD

cPP to which this list applies	collaborative Protection Profile for Application Software
Latest definitive cPP version	TBD
Supporting Document for cPP	Evaluation Activities for Application Software cPP
Latest definitive SD version	TBD

Allowed Packages:
